Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claims 51-55, 63-68, 70, and 73-85 are rejected under 35 U.S.C. 102(e) as being anticipated by Koros et al. (US Patent 5,928,139). Koros et al. disclose a retractor assembly capable of manipulation of the spinal area having a blade (54), a body (32), and first and second enlarged edges (58) extending in an axial direction forming a channel nested in between (approximately 76/78) to maintain the retractor in a predetermined position relative to the body, or for slidable movement. The channel is open in a lateral direction (not cannulated or closed) and has a concave shape extending continuously from the first enlarged edge and open in a lateral direction to provide an unobstructed view of the surgical site. The retractor also has a first and second supporting member (82) that support a pin (83) that helps to position the retractor blade relatively. The retractor also has a handle portion (34) that sits relative to the other parts of the device. The device also has a distracter tip (60) to facilitate insertion.

Response to Arguments

Applicant's arguments with respect to claims 51-55, 63-68, 70, and 73-85 have been considered but are not persuasive. It is held that the prior art still reads on the claimed invention. As noted in the previous action, a supporting member supports a pin which helps to guide the retractor assembly. The area around 82 as shown in the Figures is considered at least a "supporting member" as it would provide support or guidance for the pin portion as noted.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. See PTO-892.
